

PLASTIC AND METAL PARTS

The car programme comprises four main groups of products: textile products, metal products, plastic products as well as tool making. Products, such as tools are for the interior and exterior car parts or their sub-assemblies.

With excellent and high quality plastic program in the automotive industry we produce various products from headrests, armrests, side panels for seats, seat structures and also smaller parts, where the combination of metal is needed.

- For smart High-Tec seats
- With Velour Flock foams
- For clima seats
- A-surface materials lamination (Alcantara, Vinyls, Fabrics) is important assortment in our portfolio

NEWS IN TEXTILE LAMINATES

New in our assortment are laminated materials for innovative applications as the covers:

- With a few seams or without seams (3D mesh, 3D foams, Velour foams,)
- With low weights because the laminated foams are of lower density, lower thickness
- With recycled and BIO based textiles as needle punched nonwovens, wadding, felts, knitting, vinyls
- With low emissions

TECHICAL TEXTILE LAMINATES

At TT Okroglica, we follow the trends and needs of the automotive industry in the interior segment.

Laminated foams in various combinations are a challenge and a goal for us, which we realize throughout the supply chain Tier1, Tier2 to OEMs.

All our laminated materials comply with the overall OEM specifications (VW specifications, DBL specifications, TL specifications, etc.). We offer all kinds of technical textile laminates: PU foams, knitting materials, needle punched materials, felts, waddings, nonwovens, mesh spacers, web glue, powder glue, fabric dotz glue, recycled materials, BIO based materials, A-surface materials fabrics, vinyls..
