CABLE DIVISION

IMPREGNATION LINE

New impregnation line will have the ability to coat material up to 2,2m of width, resulting in 40.000.000m² of semi-conductive material annually.

LAMINATION LINE

Latest design lamination line with automatic powder feeding, three calendering units, and automatic lateral adjustment of the material and final product in order to achieve optimum quality of product, with annual capacity of 35.000.000m².

INNOVATIONS

CHEMICAL BONDED NONWOVEN PRODUCTION LINE

The production line has the capability of producing light weight fabrics with weights from 15-50g/m², speeds of up to 30m/min, and annual production capacity of 35.000.000m².
